2459	obre Resiliencia:														

2460	El porcentaje de población acumulado por estado en relación con el porcentaje de población acumulado nacional refleja mayor resiliencia en salud DE ESE ESTADO, cuando es mayor el primero que el segundo y cuando las tasas de defunción por 100 mil habitantes son bajas (por debajo del promedio mundial de 80 para casos respiratorios). Se colorean en Amarillo algunos casos relevantes de Resiliencia DEL ESTADO y se marcan en verde casos de MUNICIPIOS de muy baja Tasa, pero los porcentajes de población Acumulada pueden no ser mayores en el estado, en comparación con el nacional, por lo que la Resiliencia no es del ESTADO sino sólo del MUNICIPIO. Columnas Naranja, Azul y Verde Respectivamente Casos Municipal, Entidad y Nacional con respectivas Tasas en amarillos azul celeste y verde claro en últimas 3 columnas. Tasa Nacional=Promedio Mundial de Casos Respiratorios: Conclusión: El covid no fue mayor al histórico de casos respiratorios														
2461	Cálculo de Días totales en el listado de Casos: max(fecha)=2023-06-22 - min(fecha)=2020-03-18 = (to_days(max(fecha))-to_days(min(fecha))) = 1191 días /365 días por año = 3.2630 años														
2462	La manera más rápida de leer este informe, es de abajo hacia arriba, en las 3 últimas columnas. La última columna es la tasa promedio nacional de defunción por covid. Esta sólo vale el último valor. La penúltima columna azul, para tasa de la entidad, sólo vale la última de cada estado y la tasa municipal siempre es válida porque el listado es de cada municipio.
